### **DETAILED ACTION**

A reply containing claim amendments and remarks was filed on 11/19/2009. Claims 28, 29, 36, and 54-57 are pending.

## Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 28, 29, and 36 are rejected under 35 U.S.C. 103(a) as being unpatentable over Bates in view of Ding for reasons of record and those discussed below.

Response to Applicants' Arguments

Applicants argue that the method as currently recited leads to products having a different regiochemistry than that of the method suggested by the art. This argument fails for lack of evidentiary support; Applicants point to no evidence of record that supports the alleged differences in regiochemistry. Applicants point to Figure 1 of the specification as evidence, but this figure is not fully representative of the claims; it is merely one example that happens to have a different regiochemistry than the prior art method. The claimed method is open to the inclusion of other steps, which allows for regiochemistries different from that in claim 1.

# Claim Rejections - 35 USC § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 28, 29, 36, and 54-57 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

The claims now recite the step of "subsequent reductive amination." The substrate for the reductive amination is unclear. This is especially so because the methods allow for additional steps between the acylation and the reductive amination.

Claim 57 requires a polymer that is either an amino-terminated PEG or TEMPO.

This claim is indefinite because TEMPO is not a polymer. Further, the claim should read "amine-terminated PEG." Amine is a noun, amino is an adjective.

## Allowable Subject Matter

The examiner suggests the following amendments that would put the Application in condition for allowance.

Cancel claims 28, 29, and 36.

In claim 54, delete "subsequent reductive amination" and insert --- followed by reductive amination of the acyl carbonyl to form a conjugate of the first block copolymer and the biobeneficial polymer --- therefor.

In claim 57, replace "amino-terminated" with --- amine-terminated ---, and delete "or 4-amino-2,2',6,6'-tetramethyl piperidine oxide (4-amino-TEMPO)."

#### Conclusion

**THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within

Application/Control Number: 10/723,043

Art Unit: 1618

TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
